CC pDC409-LZ-TWEAK, which encodes a fusion protein recording a growth CC hormone leader, a leucine zipper multimerisation domain, and the CC extracellular domain of human TWEAK. The fusion protein was used in the isolation of human TWEAK receptor (TWEAKR)-expressing clones CC from a COS cell human cDNA library. The TWEAK protein is a CI member of the tumour necrosis factor (TWE) family and induces angiogenesis. TWEAKR may therefore be used to screen for and develop CC angiogenesis. TWEAKR may therefore be used to screen for and develop CC used in the treatment and diagnosis of human disease. The disorders CC mediated by angiogenesis include coular disorders characterised by ocular CC retinoblastoma, retinopathy of prematurity, retrolental fibroplasia, CC retinoblastoma, retinopathy of prematurity, retrolental fibroplasia, CC retroscularisation, macular degeneration and corneal graft CC reumatism and psoriasis. Other treatable diseases include malignant and metastatic conditions such as sarcomas and carcinomas, benign tumours and preneoplastic conditions, myocardial angiogenesis, haemophilic joints, scleroderma, vascular adhesions, atherosclerotic plaque neovascularisation, telangiectasia, wound granulation, coronary atherosclerosis, peripheral atherosclerosis and ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches 548;

                                                                                                                                                                                                                      A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences in AAT19001-T28837 and which is able to hybridise to part of human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-c untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNA bybridise with specific mRNAS. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Burn T,
Qian F;
                                                                                                                                                                                                                              Antibodies (Ab) that distinguish between normal and mutant PKD1 sequences can also be used in diagnostic tests. Anti-PKD1 Ab may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKD1. Ab are also useful in rational drug design studies to identify and test inhibitors of PKD1. Sense and antisense sequences derived from the PKD1 gene may
                                                                                                                                                                                                                                                                                                     The present sequence is the human polycystic kidney disease 1 (PKD1) gene. The PKD1 gene or polypeptide may be used to treat autosomal dominant polycystic kidney disease (APKD), and identify carriers of mutant PKD1 genes, i.e. subjects susceptible to APKD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; polycystic kidney disease 1; PKD1; treatment;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     34549
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     34489
The present sequence is that of the normal human PKDl gene from chromosome 16. Mutations in this gene (e.g. transitions, transversions, deletions and/or insertions) are associated with adult-onset polycystic kidney disease (APKD). The PKDl locus is GC-rich (62.4%). Comparison of this sequence with a previously reported partial cDNA sequence revealed differences at three locations (see features table). The most significant difference is the presence of two additional cytosine residues on the plus-strand at position 4566 of the previously reported sequence. The insertion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 old_sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31-JAN-1995;

The PKD1 gene contains 23 Alu repeats. There is a region consisting of 17 tandem copies of a perfect 27 brepeat and two large CT-rich regions.

Antibodies (Ab) that distinguish between normal and mutant PKDI sequences can also be used in diagnostic tests. Anti-PKDI Ab may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKDI. Ab are also useful in rational drug design studies to identify and test inhibitors of PKDI. Sense and antisense sequences derived from the PKDI gene may used for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC omprising the sequences given in AAZI2532 to AAZI779. Also described is CC a method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell councerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell councerous where the gene product is encoded by one CC plynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and CC therapeutic purposes. The polynucleotides may also be used to construct carrays for diagnostics (which may be used to determine function of an CC diagnostic (e.g. to identify abnormal or diseased tissue in a human, to CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC diagnosis, prognosis and management of colorectal cancer, breast cancer, CC and lung cancer. The polynucleotides can also be used to screen for CC cancer in the content of the colorectal cancer, breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                               Q
                                         DЬ
                                                                                                                                                                                                AAA00010 to AAA02716 represent polynucleotides isolated from cDNA
CC libraries constructed from human colon cancer cell lines. The present
CC invention also describes a method of detecting differentially expressed
CC genes correlated with a cancerous state of a mammalian cell, comprising
CC detecting at least one differentially expressed gene product in a test
CC sample derived from a cell suspected of being cancerous, where detection
CC of the differentially expressed gene product is correlated with a
CC cancerous state of the cell from which the test sample was derived.
CC The polynucleotides sequences can be used in a method for detecting
CC differentially expressed genes correlated with a cancerous state of a
CC mammalian cell. The polynucleotides can also be used as probes for
CC detecting and mapping related genes. They can be used in diagnosis and
CC pre-metastatic or metastatic cancerous states, stages of cancer, or
CC responsiveness of cancer to therapy). This is particularly for breast
CC cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-

                                                                                                           The sequence is that encoding mouse tumour necrosis factor related CC ligand (TRELL). TRELL or active fragments can be included with a CC carrier in pharmaceutical compositions to treat cancer, autoimmune CC diseases or immune responses to tissue grafts, or to stimulate or CC suppress the immune system. It is useful to screen for TRELL receptors, by labelling with a detectable label and screening CC compositions for binding. Agents interfering with TRELL-receptor CC binding can also be screened for, can then be administered, optionally with interferon-gamma, to induce cell death or CC reat, suppress or alter immune responses (especially involving human CC adenocarcinoma cells) involving a signal pathway between TRELL and its Creeptor. The DNA sequence can be used in gene therapy for TRELL-related disorders in mammals (especially humans), e.g. tumours, CC autoimmune and inflammatory diseases or inherited genetic disorders, CC introducing into cells, and expressing, therapeutically effective amounts of a vector, e.g. a virus comprising a gene encoding TRELL. CC It may also be of use in the preparation of prepare probes for creening natural/synthetic DNAs for TRELL-encoding sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq_name: /SIDS1/gcgdata/geneseq/geneseqn-emb1/NA1998.DAT:AAV18599
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /SIDS1/gcgdata/geneseq/geneseqn-emb1/NA2001A.DAT:AAH13929

                                                                                          alignment_scores:
                                                                                                                                                                            CC This invention describes isolated Tumor Necrosis Factor (TNF) family Cr receptor polypeptides: APO4, APO6, APO8 and APO9 or their active CC fragments, and isolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or CC their active fragments. APO4 is useful for diagnosing prostate cancer CC by determining levels of APO4 in an individual. Prostate cancer can also be treated using APO4 selective binding agents linked to a therapeutic CC moiety. APO4 polypeptides are also useful for identifying selective CC binding agents, useful in diagnosis/treatment of disease by binding of CC agents to the polypeptide/active fragment which is extracellular, or CC expressed on the cell surface. The binding is preferably performed in CC vivo. APO4 polypeptides/active fragments are also useful for screening CC for agonists and antagonists by binding and observing the changer in APO4 CC activity. Effective pharmacological agents useful in diagnosis or CC treatment of disease are also identified using APO4 polypeptides/active fragments and APO4 signal transducer molecules that specifically interact CC with a cytoplasmic domain of APO4 and detecting a change in level of APO4 CC activity. The method is performed in vivo or in vitro. APO polypeptides CC are all useful as immunogens for preparing antibodies. APO4 is also CC useful for diagnosis/treatment of developmental or gestational CC abnormalities. APO8 was transfected to human breast carcinoma cell line MCF-7, and induced apoptosis.

                                                                                                             The TNF-related endothelium proliferative agent (TREPA), or its activators or agonists, are used to treat a deficit of TREPA, e.g. to promote wound healing or tissue grafting, by promoting vascularisation, also to induce apoptosis for treating cancer and eliminating autoreactive T cells, as an adjunct to cancer chemotherapy or antiviral treatment. TREPA peptides can also be used to target cytotoxic agents or for affinity isolation of the corresponding receptor, the nucleic acid for which can be used to transform tumour cells to render them more responsive to TREPA and to screen for TREPA mimics.
                                                                                                                                       Ribozymes, antisense RNA, antibodies or peptides, are used to treat TREPA-associated diseases, e.g. tumours and metastases (by inhibiting vascularisation), inflammation or a wide range of autoimmune conditions, conditions involving abnormal stimulation of epithelial cells (e.g. atherosclerosis), for birth control (inhibiting ovulation and placental formation) or other angiogenic conditions (e.g. ulcers).
                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 11; Page 123-4; 142pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting nucleic acid encoding TREPA - useful for diagnosis treatment of autoimmune disease, tumours and inflammation

```
Inducing angiogenesis in mammal at desired sites for promoting wound healing, by administering soluble fragment of extracellular domain of tumor necrosis factor related endothelium proliferative agent protein
```

Example 2; Column 73-74; 53pp; English.

Soluble biologically active TREPA are used to treat TREPA-associated diseases, tumours or metastases. TREPA is used for inducing anglogenesis in human for promoting wound healing and for vascularising grafted tissue for successful grafting and to promote tissue grafts. The present sequence is a cDNA clone ID #690050 encoding human TREPA. The present invention relates to extracellular signal molecules, particularly members of tumour necrosis factor (TNF) family molecules designated as TREPA (TNF related endothelium proliferative agent).

Sequence 1236 BP; 225 Α; 416 C; 358 G; 237 T; 0 other;

                  diseases or immune responses to tissue grafts, or to stimulate or suppress the immune system. It is useful to screen for TRELL receptors, by labelling with a detectable label and screening compositions for binding. Agents interfering with TRELL-receptor binding can also be screened for, can then be administered, optionally with interferon gamma, to induce cell death or treat, suppress or alter immune responses (especially involving human adenocarcinoma cells) involving a signal pathway between TRELL and its receptor. The DNA sequence can be used in gene therapy for TRELL-related disorders in mammals (especially humans), e.g. tumours, autoimmune and inflammatory diseases or inherited genetic disorders, by introducing into cells, and expressing, therapeutically effective amounts of a vector, e.g. a virus comprising a gene encoding TRELL. It may also be of use in the preparation of prepare probes for services of the preparation of prepare probes for services of the preparation of prepare probes for the preparation of the preparation of the prepa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-MAR-1997;

                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a human tumour necrosis factor (TNF) and lymphotoxin homologue designated Apo-3 ligand. Apo-3 ligand has cytostatic activity. Apo-3 ligand can be used to induce apoptosis in mammalian cancer cells, to induce NF-kappaB-dependent transcription amammalian cancer cells, to induce NF-kappaB-dependent transcription amammalian cancer cells.

                                                                                                                                                                                                                                                                                                                                                                                                1gnment_scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TWEAKE agonists and antagonists for the modulation of angigenesis, to be used in the treatment and diagnosis of human disease. The disorders mediated by angigenesis include ocular disorders characterised by ocular neovascularisation such as diabetic retinopathy, neovascular glaucoma, retinoblastoma, retinopathy of prematurity, retrolental fibroplasia, rubeosis, uveitis, macular degeneration and conneal graft neovascularisation, and inflammatory diseases such as arthritis, rheumatism and psoriasis. Other treatable diseases include malignant and metastatic conditions, myocardial angiogenesis, haemophilic joints, soleroderma, vascular adhesions, atherosclerotic plaque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pDC409-LZ-TWEAK, which encodes a fusion protein comprising a growth hormone leader, a leucine zipper multimerisation domain, and the extracellular domain of human TWEAK. The fusion protein was used in the isolation of human TWEAK receptor (TWEAKR)-expressing clones from a COS cell human cDNA library. The TWEAK protein is a member of the tumour necrosis factor (TNF) family and induces angiogenesis. TWEAKR may therefore be used to screen for and develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulating angiogenesis in a mammal for treating diseases mediated by angiogenesis, e.g. solid tumours and vascular deficiencies of cardiac peripheral tissue, by administering antagonist or agonist of TWEAK

CC This invention describes isolated Tumor Necrosis Factor (TNF) family Creceptor polypeptides: APO4, APO6, APO8 and APO9 or their active CC fragments, and isolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or CC their active fragments. APO4 is useful for diagnosing prostate cancer CC by determining levels of APO4 in an individual. Prostate cancer can also be treated using APO4 selective binding agents linked to a therapeutic CC moiety. APO4 polypeptides are also useful for identifying selective CC binding agents, useful in diagnosis/treatment of disease by binding of CC expressed on the cell surface. The binding is preferably performed in CC vivo. APO4 polypeptides/ active fragment which is extracellular, or CC expressed on the cell surface. The binding is preferably performed in CC vivo. APO4 polypeptides/ active fragments are also useful for screening CC activity. Effective pharmacological agents useful in diagnosis or CC treatment of disease are also identified using APO4 polypeptides/active fragments and APO4 signal transducer molecules that specifically interact CC with a cytoplasmic domain of APO4 and detecting a change in level of APO4 activity. The method is performed in vivo or in vitro. APO polypeptides are all useful as immunogens for preparing antibodies. APO4 is also useful for diagnosis/treatment of developmental or gestational CC abnormalities. APO8 was transfected to human breast carcinoma cell line CC abnormalities. APO8 was transfected to human breast carcinoma cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   alignment_block:

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The invention relates

Claim 1; SEQ ID NO 15892; 21pp + Sequence Listing; English

to an isolated nucleic acid detection

reagent

is

                                           allo-stimulatory capacity, thereby augmenting an immune response. The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-KB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK-expressing cells from the negative effects of chemotherapy or the presence of high levels of TNF-alpha. The products can also be used for detection and drug
                                                                                                                                                                                                                                                                                                       This cDNA encodes a murine RANKL, a ligand for the RANK (receptor activator of necrosis factor kappaB (NF·kB)) polypeptide. RANK is member of the tumour necrosis factor (TNF) family. A soluble RANK may be used for inhibiting activation of NF·kB, by contacting a cexpressing membrane-associated RANK with a soluble RANK which bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated ligand for receptor activator of NF-kappa B - used to develop products for augmenting an immune response for inhibiting inflammatory response and for protection of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Anderson DM,

                                                                                                                                                                                                                                                                                                                                                                                                           nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NR-KB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to RANK ligand (RANKL). The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NR-kB by RANK antagonists may be useful in amediorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This cDNA encodes a murine RANKL, a ligand for the RANK (receptor activator of necrosis factor kappaB (NF-kB)) polypeptide. RANK is a member of the tumour necrosis factor (TNF) family. Host cells transformed or transfected with an expression vector comprising the RANK encoding

cc kappab (RANK) proteins and their corresponding DNAS. RANK is a member cof the tumour necrosis factor (TNF) receptor superfamily and associates with TNF receptor associated factor (TRAF) 2 and 3 which are important cc with TNF receptor associated factor (TRAF) 2 and 3 which are important cc in the regulation of immune and inflammatory response. The receptors cc are useful for regulating immune response and in screening for inhibitors of signal transduction, e.g. for screening the cmolecules that inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, cc TRAF5 and particularly TRAF6. NF-kappab inhibition by RANK antagonists care useful in ameliorating the negative effects of an inflammatory cresponse that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, acute inflammatory creactions and the effects of bone resorption. RANK acts as an anti-cappoticit signal and rescue the cells that express RANK from apoptosis. Cc soluble forms of the receptor are used in vivo or in vitro based cappotionists of RANK-mediated NF-kappa B activation, or to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-DEC-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New receptor activator of NF-kappaB (RANK) polypeptides, useful for regulating immune response, in screening for RANK inhibitors, or as adjunct therapy for disease characterized by neoplastic cells that express RANK -
                                                                                                                                               transduction of a signal via RANK compositions are used in the development of both agonistic and antagonistic antibodies, or as an adjunct therapy for disease characterised by neoplastic cells that express RANK. Compounds that interfere with RANK/TRAF6 interactions are useful for modulating the formation of osteoclasts from osteoclast precursors and for modulating osteoclast function and activities. They are used as inhibitors of diseases associated with excess bone resorption
                                                   and as immunosuppressants or anti-inflammatory agents. The RANK DNAs are useful for the expression of recombinant proteins, as probes for analysis of the presence or distribution of RANK transcripts, while the proteins are useful in preparing kits for the detection of soluble RANK, or monitor RANK-related activity. The present sequence is a cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 7; Column 63-66; 47pp; English

                                                                                                                 The present invention relates to receptor activator of NF-chi B (RANK) DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to chromosome 13q14. RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2 and TRAF3. The DNA molecules are useful for producing ligands of RANK. The ligands are useful for regulating immune response and in screening for inhibitors of RANK. The present sequence is murine RANKL CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murine; receptor activator of NF-chi B; RANK; tumour necrosis factor; CD40; TNF receptor-associated factor; TRAF; ligand; immune response; chromosome 18q22.1; RANKL; chromosome 13q14; transmembrane protein; s

factors (TRAFS). Triggering of RANK by overexpression or co-expression of factors (TRAFS). Triggering of RANK by overexpression or co-expression of factor RANK and membrane bound RANK ligand (RANKL) results in upregulation of the transcription factor that is most extensively utilised in cells of the immune system.

Inhibition of Nf kappaB by RANK antagonists is useful in ameliorating negative effects of inflammatory reactions, and the effects of excess bone resorption. The RANK DNAs, proteins and their analogues are useful for the preparation of pharmaceutical compositions, for infecting target cells for use in gene therapy applications in diagnosing diseases associated with RANK, and as targets for use in screening assays. They may be used in the treatment or diagnosis of immune system dysfunction. The present invention also encompasses gene therapy methods to correct gene-activating mutations, associated with e.g. familial expansile costeolysis (FEO) and early onset paget's disease of bone (EP). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammatory reaction; bone resorption; gene therapy; immunomodulator; immune system dysfunction; familial expansile osteolysis; FEO; early onset Paget's disease of bone; EP; cytostatic; ss.
                                                                                                                                                                                                                                                                                                                       The present invention relates to a novel receptor, referred to as (receptor activator of NF (nuclear factor)-kappaB), a member of To (tumour necrosis factor) receptor superfamily. RANK is a Type I transmembrane protein that interacts with TNF receptor-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-NOV-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mus musculus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length
(see http://www.hysc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a "working draft" sequence. It currently
consists of 7 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 as soon as it is available and the accession number will be preserved.
